Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

1. Claims 1-6, 9-20 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Spaling (2002/0077111).

Spaling shows a system for monitoring congestion in a cellular communication system. The system of Spaling includes a switch 12 and cell sites (16,18,20..) in communication with the switch. The system of Spaling also includes a monitoring module in communication with the switch for monitoring occurrences of congestion in the system. Since congestion in the switch to cell link is intrinsically related to the congestion between the cell station and the mobile, if the cell-mobile link is monitored for congestion this result is also indicative of switch-cell station congestion. The monitoring module provides a message and possibly corrective action in response to the measurement of congestion being greater than a threshold. See paragraph 46-46. The

measurement is also measured against time to determine if the rate of congestion exceeds a threshold.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 7 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Spaling as applied to claims 1,3 and 4 above, and further in view of what is common in the art.

The monitoring module provides a message in response to the measurement of congestion being greater than a threshold. The examiner takes official notice that email and pager notification are common messaging techniques used in the art of alarm reporting.
